CALEB GRIMAH

SENIOR SOFTWARE ENGINEER | FULL-STACK, MOBILE & PLATFORM ENGINEERING

Abuja, Nigeria • +234 706 062 4870 • lamar.grimah@gmail.com, caleb.grimah@gmail.com • https://thenorthstar.tech/

PROFESSIONAL SUMMARY

Senior Software Engineer with 8+ years of experience building production web, mobile, backend, and connected-TV software across video streaming, healthcare, biometric identity, and offline-first systems. Owns the full lifecycle, from architecture and API design to deployment, performance tuning, and production troubleshooting, and independently builds complex products from the ground up. Strong in TypeScript, React, React Native, Node.js, Java, Kotlin, Spring Boot, and PostgreSQL, with a focus on scalable SOLID architecture, reliable systems, accessible interfaces, and maintainable code.

CORE TECHNICAL EXPERTISE

Languages: TypeScript, JavaScript, Java, Kotlin, Dart, Go, SQL, Python
Frontend & Mobile: React, Next.js, React Native, Flutter, Android SDK, Jetpack Compose, Kotlin Multiplatform
Backend & Data: Node.js, Express, Spring Boot, Ktor, REST APIs, WebSockets, PostgreSQL, MySQL, MongoDB, Redis, RabbitMQ
Testing: Jest, React Testing Library, Playwright, JUnit, API, integration, and end-to-end testing
Observability: Sentry, OpenTelemetry, Prometheus, structured logging, metrics, distributed tracing, profiling
Architecture: Modular monoliths, event-driven systems, data modeling, authorization, entitlements, transactional workflows, offline-first sync, caching
DevOps: Docker, Git, GitHub Actions, CI/CD, cloud deployment
AI-Assisted Engineering: Coding agents, repository-aware development, RAG and context retrieval, test generation, code/diff review, debugging, security checks

PROFESSIONAL EXPERIENCE

Senior Software Engineer — Endeavor Streaming | Remote | Oct 2024 – Jul 2026

- Built and maintained production streaming apps in React, React Native, and TypeScript, delivering high-performance video experiences across web, Android, iOS, smart TVs, and connected-TV platforms.
- Implemented live and on-demand playback, including playback-state sync, stream availability updates, session management, player controls, buffering, interruption recovery, and app life-cycle handling, for reliable viewing across devices and networks.
- Built real-time UI that reflects playback progress, content availability, authentication changes, and entitlement status without screen reloads.
- Designed reusable React and React Native components, hooks, and platform-aware logic for content discovery, playback, profiles, personalization, and subscriptions, balancing shared code with device-specific needs.
- Developed smart-TV interfaces with directional navigation, remote-control input, focus management, and optimized rendering for large screens and resource-constrained devices.
- Integrated REST APIs for authentication, content metadata, playback authorization, entitlements, preferences, and session state, managing async requests, caching, and error handling.
- Diagnosed and fixed playback failures, buffering, stale state, rendering bottlenecks, memory pressure, and navigation defects through systematic, cross-platform debugging.
- Collaborated with backend, video platform, product, design, and QA teams; contributed to frontend architecture, code reviews, refactoring, regression testing, and mentoring junior engineers.

Software Engineer — eHealth Africa | Kano, Nigeria | Nov 2019 – May 2024

- Built healthcare products covering electronic medical records, appointments, telehealth, pharmacy, laboratory services, memberships, and payments across web, mobile, and backend, including EHACare (Website), Health-Mate (Android | iOS), and GetCare (Web).
- Developed Node.js/Express and Spring Boot REST APIs for authentication, appointments, clinical records, orders, and payments, with validation, authorization, and error handling.
- Delivered cross-platform apps in React, React Native, Flutter, and native Android (Kotlin/Java), and implemented offline-first workflows for clinical and field operations with local data access and synchronization.
- Used Redis, RabbitMQ, and Google Cloud for caching and asynchronous messaging, cutting repeated database queries and improving API responsiveness and reliability under concurrent load.
- Ran API, integration, and regression testing; traced root causes of production incidents, SQL performance bottlenecks, and cross-platform defects and validated fixes before release.
- Mentored junior engineers through code reviews, pair debugging, and architectural discussions; collaborated with product, QA, clinical, and engineering teams.

Android Developer — Teal Technology Service (IBM OCP JV) | Abuja, Nigeria | Apr 2019 – Apr 2020

- Developed Udongo (Google Play), an offline-first Android app in Kotlin and Java for agricultural extension workers collecting field data in areas with unreliable connectivity.
- Implemented local persistence, field-form validation, queued submissions, automatic retries, and REST API integration for reliable data capture and synchronization.
- Resolved synchronization defects by tracing local records, request payloads, server responses, and connectivity changes, preventing data loss and inconsistent submissions.

Software Engineer — Biosec Solutions | Abuja, Nigeria | Apr 2018 – May 2019

- Developed BioConnect and BioSuite, building biometric enrollment, fingerprint verification, identity management, access control, and device administration features.
- Built Java and Spring Boot services and REST APIs for identity verification with request validation, authentication, role-based permissions (RBAC), and third-party integrations.
- Integrated Neurotechnology fingerprint SDKs for capture, matching, and verification; built Android and web interfaces for enrollment and administration, with asynchronous processing and traceable operation results.

FOUNDER-LED PRODUCT ENGINEERING

Astera — Creator Performance Marketplace | Founder | astera.africa

- Designed and built the platform end to end: Kotlin/Spring Boot backend, REST APIs, PostgreSQL data models, brand web portal, creator mobile app (React Native), and operations console.
- Implemented campaign management, creator submissions, reviews and approvals, performance verification, earnings, wallet activity, and reporting, with role-based authorization and workflow state transitions that keep campaign and financial records consistent.

Arcade Reality — Creator–Brand Collaboration Platform | Founder | arcadereality.org

- Built the complete product (Next.js, React, TypeScript, Node.js, PostgreSQL, Redis) across frontend, backend, APIs, database, authentication, and deployment, including creator discovery, project applications, shared workspaces, milestones, asset management, deliverable reviews, notifications, and role-based team administration.

The North Star — Portfolio & Technical Writing | thenorthstar.tech

SELECTED PRODUCTION PROJECTS

- **Vesper — Endeavor Streaming** | Platform — Direct-to-consumer live and on-demand streaming platform; contributed to web, mobile, and connected-TV apps covering playback, discovery, authentication, entitlements, and remote navigation. *Stack: React, React Native, TypeScript.*
- **GetCare — eHealth Africa** | Web Platform — Digital healthcare platform connecting patients with services; appointment booking, telehealth, and patient access. *Stack: React, React Native, backend APIs.*
- **Health-Mate — eHealth Africa** | Android · iOS — Mobile health app for patient engagement and care access, with offline-capable workflows. *Stack: React Native, Flutter, Kotlin, Java, REST APIs.*
- **EHACare — eHealth Africa** | Website — Clinical and patient-management solution covering appointments, patient records, laboratory, pharmacy, and care coordination. *Stack: React, Node.js, Spring Boot, REST APIs.*
- **EHA Clinics — eHealth Africa** | Website — Software supporting patient-facing services and operations for a provider delivering care through physical and digital channels. *Stack: Web and mobile development, API integration.*
- **BioConnect & BioSuite — Biosec Solutions** | Company Website — Biometric identity and verification solutions integrating fingerprint recognition SDKs with verification workflows. *Stack: Java, Spring Boot, Android, REST APIs, Neurotechnology SDK.*
- **Udongo — Teal Technology Service (IBM OCP JV)** | Google Play — Offline-first Android app for extension workers, with local persistence, queued submissions, retry handling, and data sync. *Stack: Kotlin, Java, Android SDK, REST APIs.*

EDUCATION

B.Sc. Computer Science | Madonna University, Rivers State, Nigeria | 2013–2017

- Founded student groups for sharing technical knowledge and solving programming challenges together.
- Mentored junior students in programming fundamentals, debugging, and project development.
